SUMMARY

Motivated and detail-oriented Junior Backend PHP Laravel Developer with a strong foundation in web development and a passion for crafting robust and scalable solutions. Proficient in PHP, Laravel, and MySQL, I bring a solid understanding of backend technologies and a commitment to delivering high-quality code. My hands-on experience includes developing RESTful APIs, architecting efficient database structures, and collaborating with cross-functional teams to achieve project goals. Eager to contribute my skills and learn in a dynamic development environment while leveraging my knowledge to create innovative web applications.

EXPERIENCE

Software Engineer

Borders & Gates

January 2026 - Present

- Engineered robust job queue systems using Laravel Horizon, enhancing background task reliability and promoting seamless processing during peak usage periods.
- Integrated third-party APIs and internal microservices to automate financial reporting processes, streamlining data collection for management services clients.
- Refined internal data validation workflows by implementing custom middleware and automated error-handling mechanisms, elevating the accuracy and consistency of financial advisory deliverables for clients.

Backend developer

Freelancer @ upwork

August 2023 - Present, cairo

- Developed and deployed Laravel applications with clean architecture and SOLID principles, resulting in **20–30% faster feature development** and improved code maintainability.
- Built and optimized **RESTful APIs** and third-party integrations, reducing API response times by **up to 40%** through caching, indexing, and query optimization.
- Designed and maintained relational database schemas, writing complex SQL queries that improved data retrieval efficiency by **35%+** in high-traffic modules.
- Implemented secure authentication and authorization using **Laravel Sanctum/Passport**, reducing security-related issues by **over 90%** through strict validation and RBAC.
- Collaborated with clients to convert requirements into technical specifications and propose scalable features, leading to **25%–50% increases in project effectiveness** and user satisfaction.
- Negotiated project scope, timelines, and deliverables across multiple freelance engagements, achieving **95% on-time delivery** and consistent positive client feedback.

Backend developer

Softigital

May 2024 - January 2025, 6th October

- Developed and maintained robust, scalable, and efficient backend systems using **Laravel** framework.
- Designed and implemented RESTful APIs, integrated third-party services, and optimized performance.
- Collaborated with front-end developers to ensure seamless integration of user-facing elements with server-side logic.
- Ensured security and data protection by implementing authentication, authorization, and other best practices.
- Wrote clean, reusable, and testable code using **PHP** and **Laravel** best practices.
- Utilized **Git** for version control and collaborated with team members using agile methodologies.
- Optimized application performance, improved database queries, and fixed bugs to enhance application speed and reliability.
- Integrated cloud-based services and automated deployment pipelines, streamlining development workflows and enhancing system scalability for large-scale projects.

PROJECT

Mountainshoes

Backend Developer • mountainshoes.shop/ • April 2025 - May 2025

- Built the backend of the e-commerce website using Laravel, implementing product catalog, shopping cart, checkout workflows, and database structure.
- Designed and optimized the database schema for products, orders, and user data to ensure efficient queries and maintain data integrity.
- Implemented user authentication, registration, and profile management, allowing customers to create accounts and track orders.
- Configured and managed deployment of the website, including server setup, environment configuration, Laravel migrations and seeding, and deployment scripts.

- Optimized performance and database interactions for product listings, search, and checkout processes to ensure a smooth and responsive user experience.
- Collaborated with front-end and design teams (or handled front-end integration) to ensure seamless user interface, plus tested and fixed bugs to maintain site stability post-launch.

Automind AI

Automind • automindai.ae • February 2026 – June 2026

- Built a dual-channel notification layer that writes an in-app feed record and sends push notifications through Firebase Cloud Messaging on every order, payment, and cash-handover event, supporting multiple devices per user.
- Shipped full English and Arabic localization across services, packages, blogs, and notification content using translatable models and locale-aware API responses.
- Authored 45+ API contract documents consumed by the mobile and dashboard teams and maintained a synchronized Postman collection, reducing integration back-and-forth.
- Added an AI-powered Smart Insights reporting service that transforms revenue, expense, and service-performance data into narrative business insights for the admin dashboard.

Hasanat

Borders n Gates • hasanat.org • January 2025 – February 2026

- Built a Laravel 11 REST API with ~200 endpoints for a multi-country donation platform serving both web and mobile clients.
- Integrated 4 payment methods (Stripe, PayPal, Apple Pay, and Google Pay) with signature-verified webhooks, refunds, and a recurring donation subscription engine supporting pause, resume, and cancellation workflows.
- Developed 3 core donation modules, including a Zakat calculator with daily Nisab price synchronization, a Qurban module with digital receipts and impact statistics, and multi-currency exchange rate synchronization jobs.
- Built admin dashboard APIs featuring Excel exports, email-OTP two-factor authentication, role-based access control, Swagger API documentation, and full English, Arabic, and French localization.
- Improved API and database performance through Redis caching, composite database indexes, eager loading, and query optimization across high-traffic endpoints.

Laundry Heroes

Laundry Heroes • laundry-heroes.com • October 2025 – January 2026

- Built the backend for an on-demand laundry pickup and delivery platform using Laravel 12, PHP 8.2, and MySQL, powering 3 separate mobile applications (Customer, Driver, and Admin) through a single versioned REST API.
- Designed the order lifecycle as a state machine with role-based transition rules that prevent invalid status changes (e.g., drivers skipping pickup or customers canceling after collection) at the domain layer, eliminating endpoint-specific validation logic.
- Delivered real-time order chat between customers, drivers, and administrators using Firebase Realtime Database, supporting unread message counts, read receipts, and bilingual (Arabic and English) push notifications through Firebase Cloud Messaging.
- Integrated the Moyasar payment gateway with 3 payment methods (Credit Card, STC Pay, and Apple Pay), including callback verification and payment reconciliation, and implemented email-OTP authentication with Laravel Sanctum for registration, password reset, and email change workflows.
- Built the admin dashboard API with order and driver analytics, promo code management, service and pricing management, ratings, in-app bug reporting, and Excel export functionality for orders.

Case prep

Laravel developer • caseprep.co/ • April 2025 – June 2025

- Integrated Firebase as the primary database to handle real-time data storage, user authentication, and course management.
- Implemented secure payment processing with PayPal and an Indian payment gateway to support smooth transactions.
- Optimized backend and frontend workflows to improve platform performance, reliability, and user experience.
- Delivered the project independently, handling end-to-end development from architecture and integration to deployment.

Sable

Laravel developer • sablesweets.com/ • June 2024 – December 2024

- Designed and developed a full-featured B2B platform, handling backend functionality to streamline business operations.
- Implemented secure authentication, role-based access, and user management to ensure system integrity and data privacy.
- Developed robust backend logic in Laravel, optimized database queries, and resolved system issues to enhance performance and reliability.
- Integrated APIs and automated workflows to enable efficient order processing, inventory management, and reporting.

Zero lice

Backend Developer • zerolice.ae/ • April 2025 – May 2025

- Managed backend development for a Next.js and Laravel-based platform, ensuring smooth integration between frontend and server-side components.
- Designed and implemented CI/CD pipelines for automated deployment of backend services, including blogs and package pricing sections.
- Optimized backend logic and database operations to improve system performance and reliability.
- Coordinated deployment processes and maintained production-ready environments to ensure seamless updates and feature releases.

Multiply Dashboard

Borders and gates · [dashboard.multiply-wealth.com](#) · April 2026 – Present

- Shipped 5 multi-currency analytics suites (Dashboard, Net Worth, ROI, Zakat, and Cash Reports) that normalize every figure to the user’s base currency through a scheduled FX integration.
- Integrated Plaid for bank account linking and daily transaction synchronization using idempotent upserts and HMAC webhook verification, reducing manual statement entry.
- Built an AI financial insights chat powered by a Groq tool-calling loop over 20+ user-scoped data tools, capping replayed history to keep token costs predictable.
- Ran 9 scheduled queue jobs with retry, backoff, and overlap protection for FX rate refreshes, Plaid synchronization, budget scans, and push notification delivery.

Accounting System

Laravel developer · [services.altahadiservices.com/](#) · September 2025 – October 2025

- Developed a comprehensive control system to manage accounting, including tracking expenses, incomes, and generating invoices.
- Implemented employee management and access control features to streamline internal operations and improve accountability.
- Built a robust backend with Laravel to handle core business logic, reporting, and system security.
- Delivered end-to-end development independently, ensuring a scalable, reliable, and user-friendly platform for financial and operational management.

B2B sable

Laravel Developer · [b2b.sablesweets.com/](#) · July 2024 – September 2024

- Designed and developed a full-featured B2B platform, handling backend functionality to streamline business operations.
- Implemented secure authentication, role-based access, and user management to ensure system integrity and data privacy.
- Developed robust backend logic in Laravel, optimized database queries, and resolved system issues to enhance performance and reliability.
- Integrated APIs and automated workflows to enable efficient order processing, inventory management, and reporting.
- Delivered end-to-end project independently, from requirements gathering and architecture to deployment and maintenance.

EDUCATION

Bachelor in computer science

Minor in Computer Science · Helwan University · Helwan · 2025 · 3.29 GPA

SKILLS

HTML, CSS, PHP, Laravel, MySQL, OOP, Design Patterns, CI/CD, Docker
